

CREATING THE NEXT GENERATION SELF SERVICE BANKING PLATFORM

Today's market requires something that allows the ATM to behave like any another digital channel

BUT IT'S NOT EASY

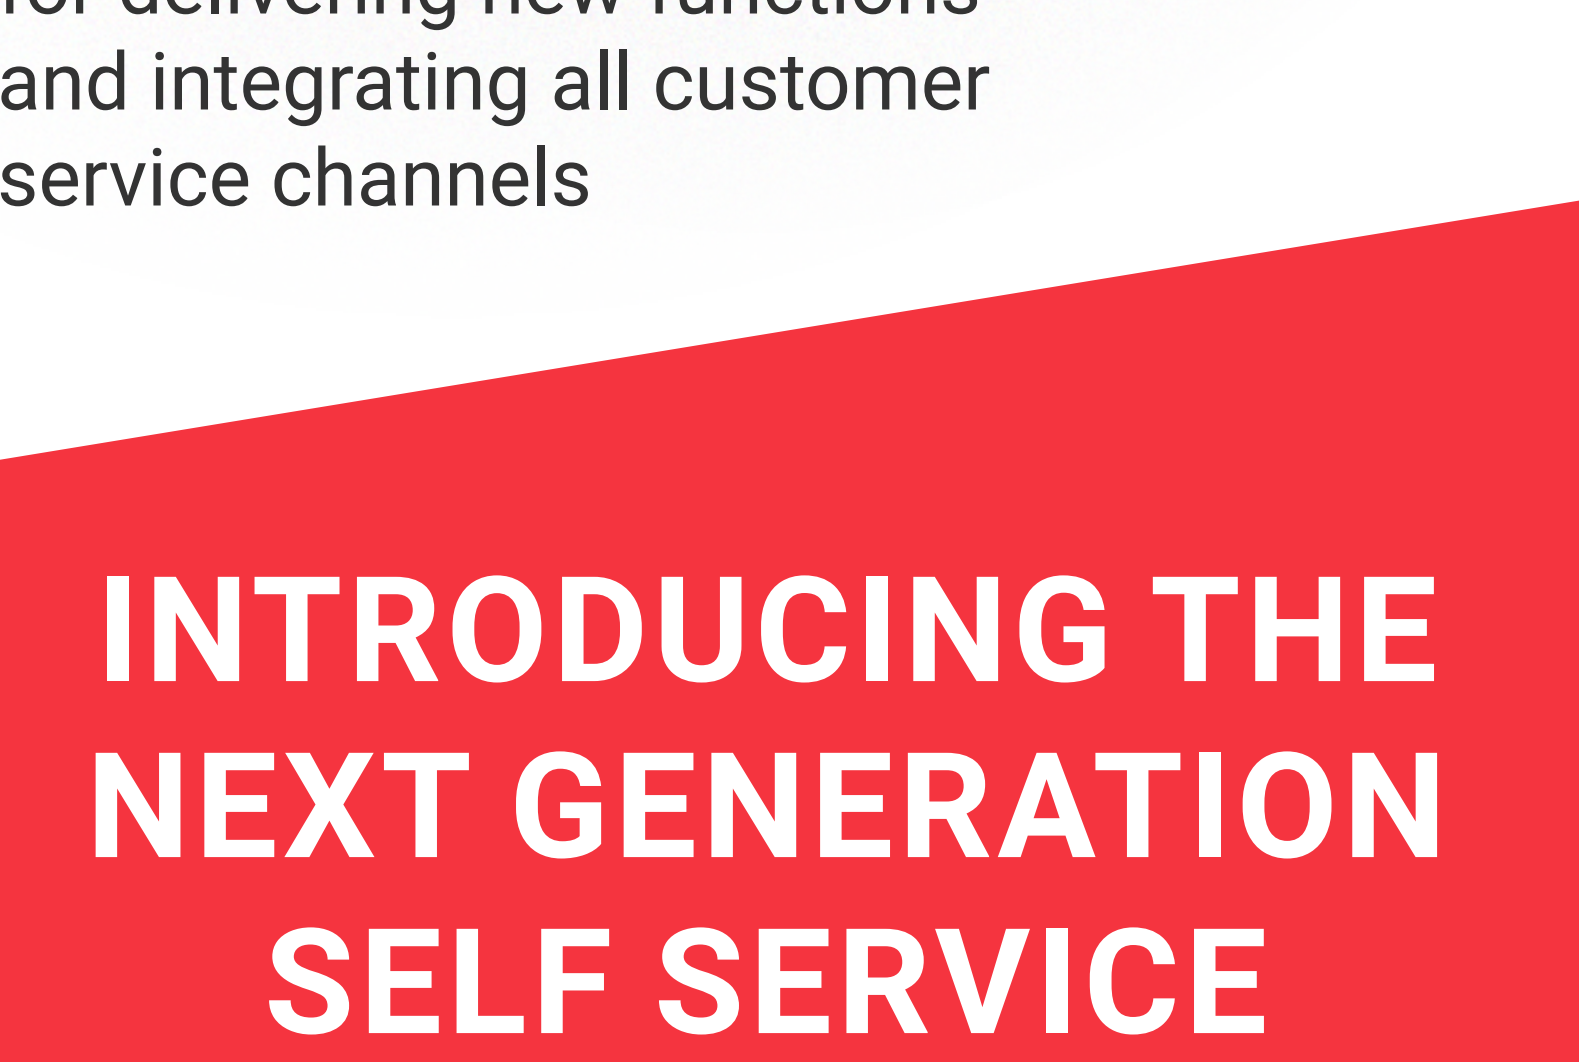

- Cost pressures
- ATMs unprofitable with reduced footfall
- Public pressure for free access to cash
- Delayed time to market for new functions
- Old technology that can't be adapted easily
- Hardware lock-in
- Fears about ATM security

BUT THE REALITY IS ...

ATM technology has too often been an obstacle. Most self-service automation uses decades-old ATM architecture.

Strong separation between ATM software and Terminal Handler at server level prevents ATM owners evolving technology for changing customer behavior.

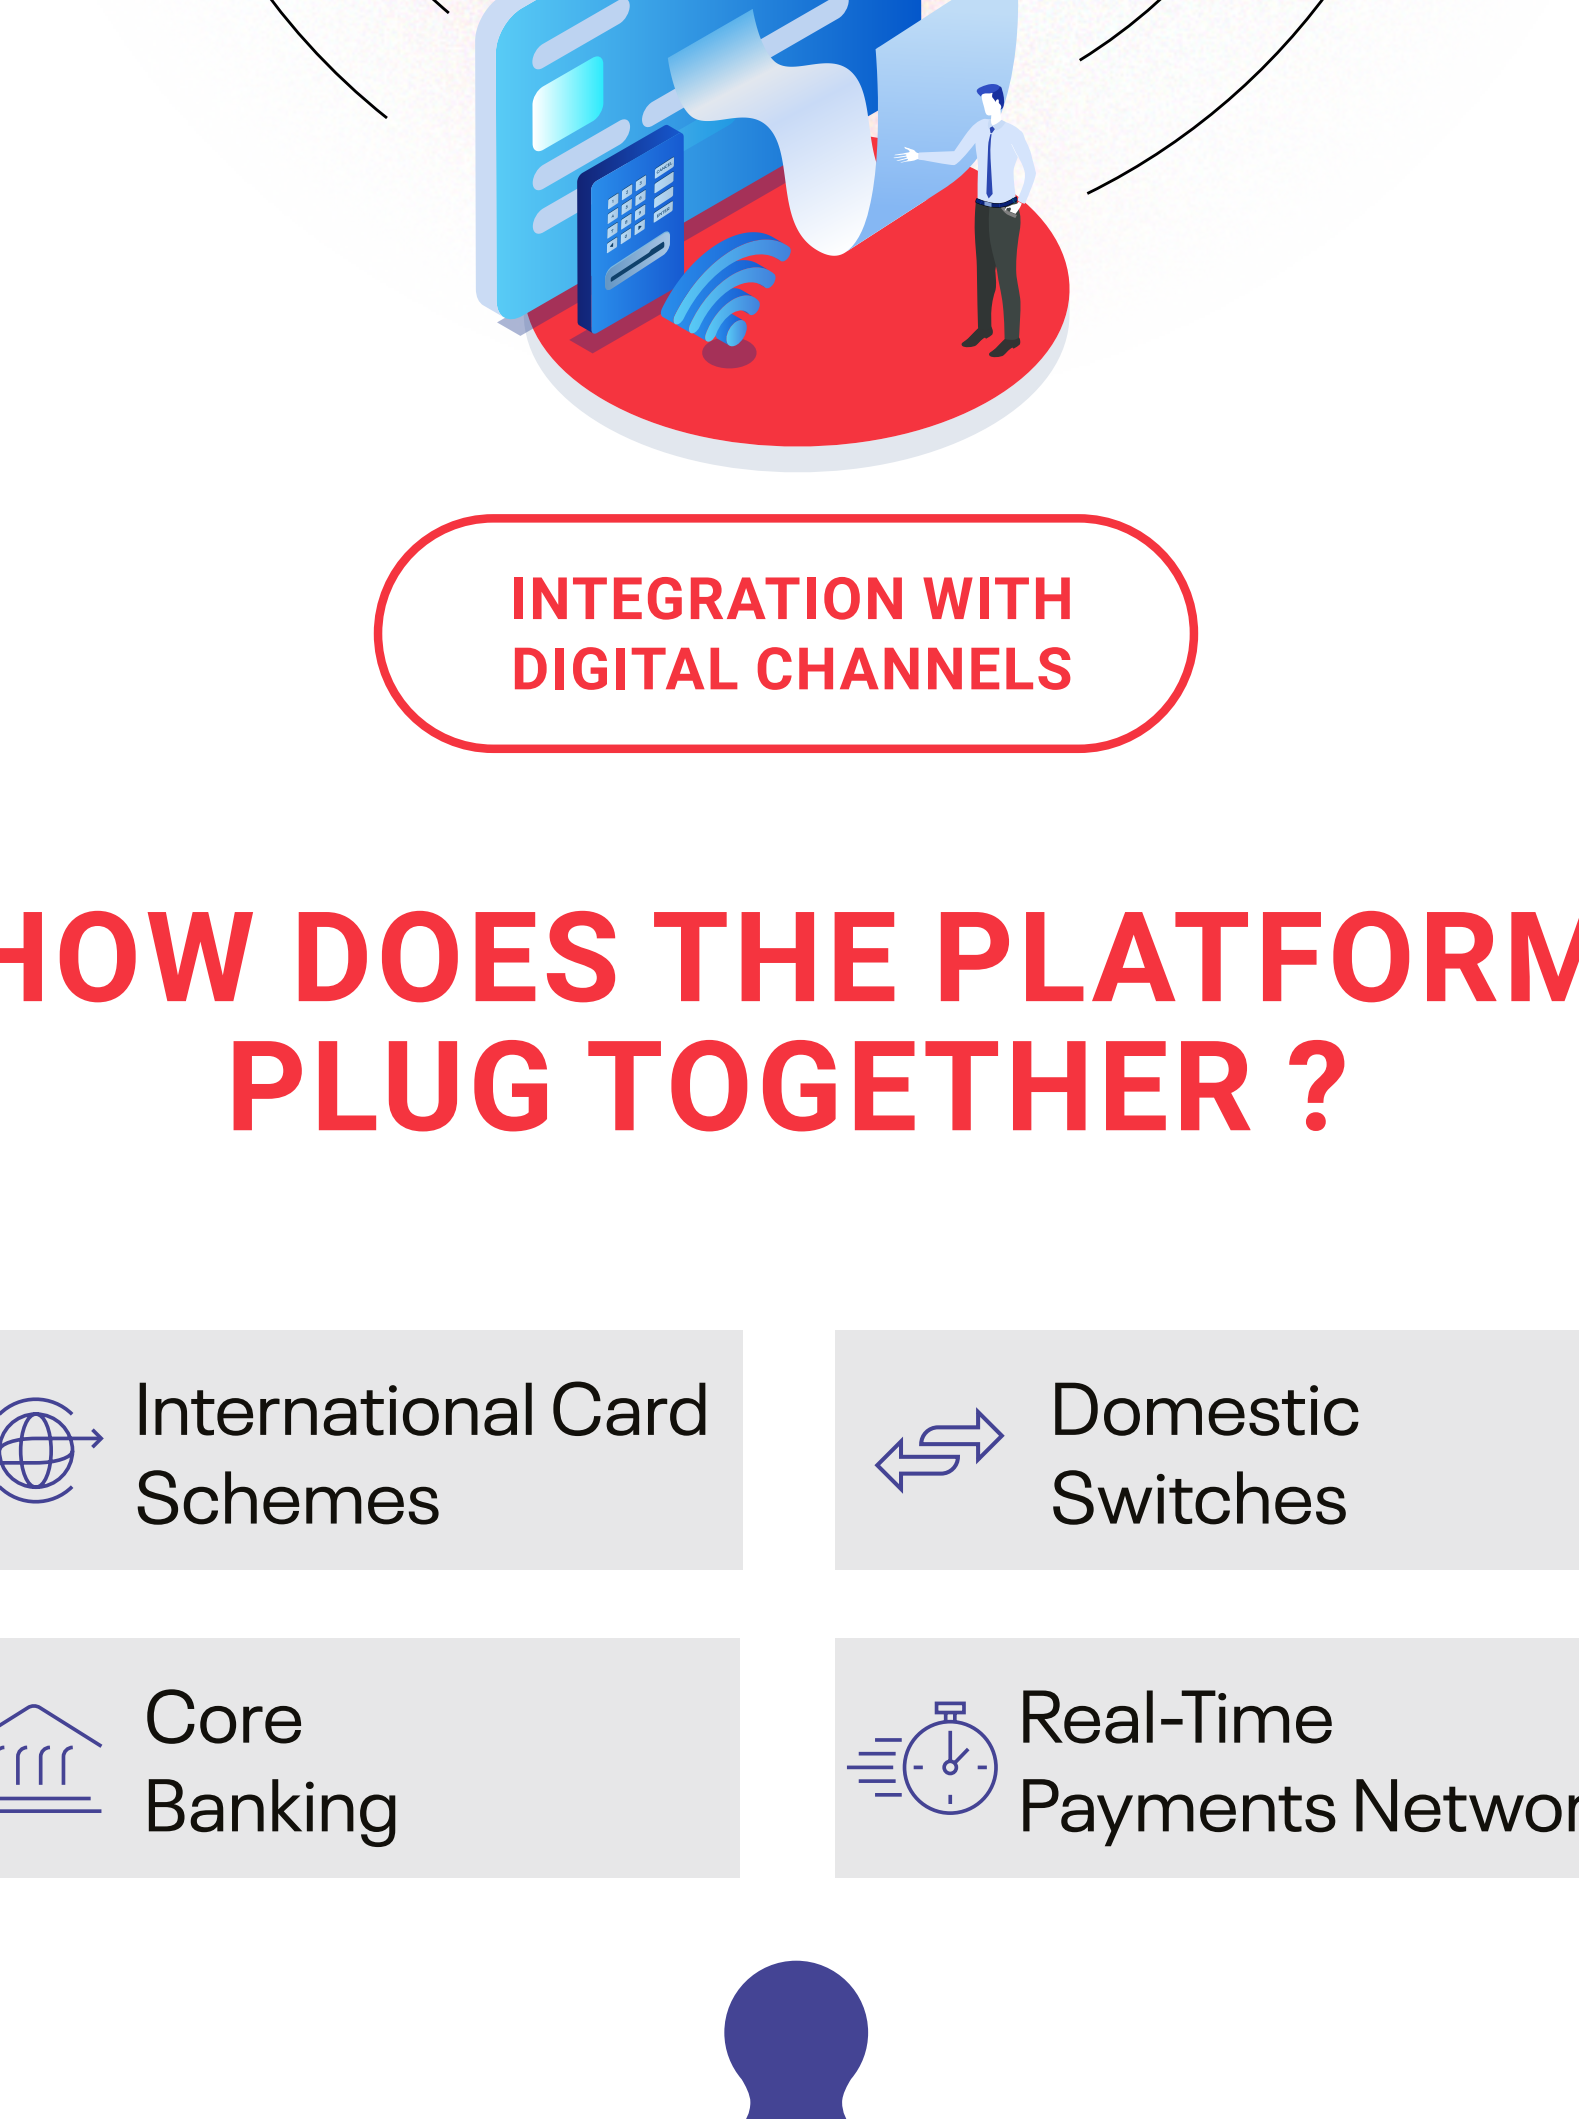

Today's model restricts and limits what banks can do. It's like the different pieces don't easily fit together.

Banks need new platform for delivering new functions and integrating all customer service channels

INTRODUCING THE NEXT GENERATION SELF SERVICE BANKING PLATFORM

Created and built by the leaders in the industry – Auriga and ACI Worldwide

HOW DOES THE PLATFORM PLUG TOGETHER ?

LET'S YOU PUT THE PUZZLE TOGETHER HOWEVER YOU WANT

So what are the benefits?

- Opportunity to reengage with customers
- Automation cuts TCO
- Greater security
- New Revenue opportunities
- Creates new revenue streams
- More appealing to customers
- Omni channel experience / easy channel integration
- Vendor agnostic – you can use any vendors' hardware and software
- Reduced time to market
